From Water to Energy –

empower your sustainable future with H₂ solutions by Bosch
Manufacturing Solutions | BMG, in the area of water purification &
electrolysis, fuel cell assembly & testing as well as power generation.

» H2 circle –
BMG as system industrialization partner

Water Purification

» BMG Pure Water System

Electrolysis – from water to hydrogen

» PEM Ely Stack Testing

» PEM Electrolyzer System

» AEM Ely Stack Testing

» SOEC & SOFC Stack Testing

Fuel Cell – from hydrogen to energy

» PEMFC Testing

» PEMFC – Assembly & Testing

» PEMFC – Power Generator

» PEMFC – Bipolar Plates Processes

» PEMFC – Coatings

» Hydrogen Gas Injection

» GDA – Shot to shot measurements

As a technology and process expert for the automotive industry, we offer you the optimum manufacturing equipment for various components in the field of chassis and steering.

From hydraulic to electric steering and driving systems: New Braking Systems like the Integrated Power Brake (IPB) and the electronic stability program (ESP) are just some examples of components manufactured with equipment from Bosch Manufacturing Solutions | BMG.

BMG | focus industries & product areas

Combustion Engine

Our high-precision production and testing equipment for diesel and gasoline injection systems, e.g. including high-pressure injectors, diesel pumps, and exhaust gas systems, are backed by the expertise of Bosch Manufacturing Solutions | BMG.

As the ICE sector matures, our services are crucial in maximizing performance and extending the lifetime of your systems. From cycle time improvements and modernizations to relocation projects, we ensure peak efficiency throughout your equipment's lifecycle.

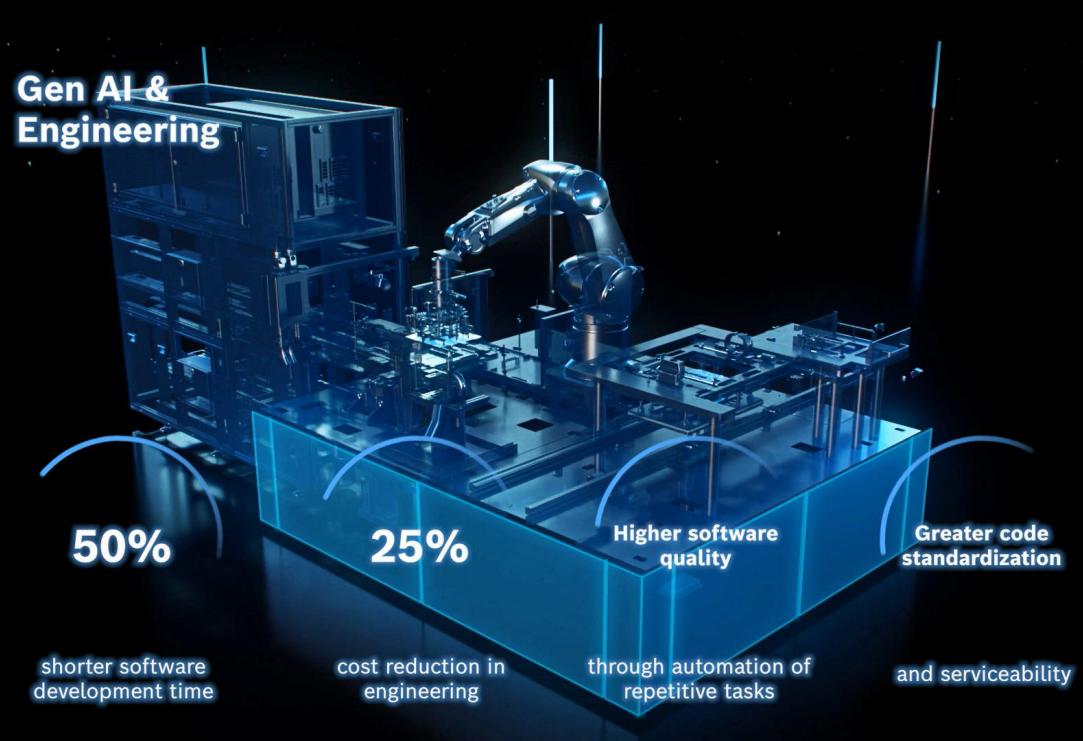

BMG | AI powered digital enginnering

We support our customers already in **SE work** - for **sustainable product design** that leads to **simpler and more cost-effective manufacturing concepts**. Thanks to our **digital engineering**, we are able to simulate even before realization and thus check everything for feasibility and technical requirements.

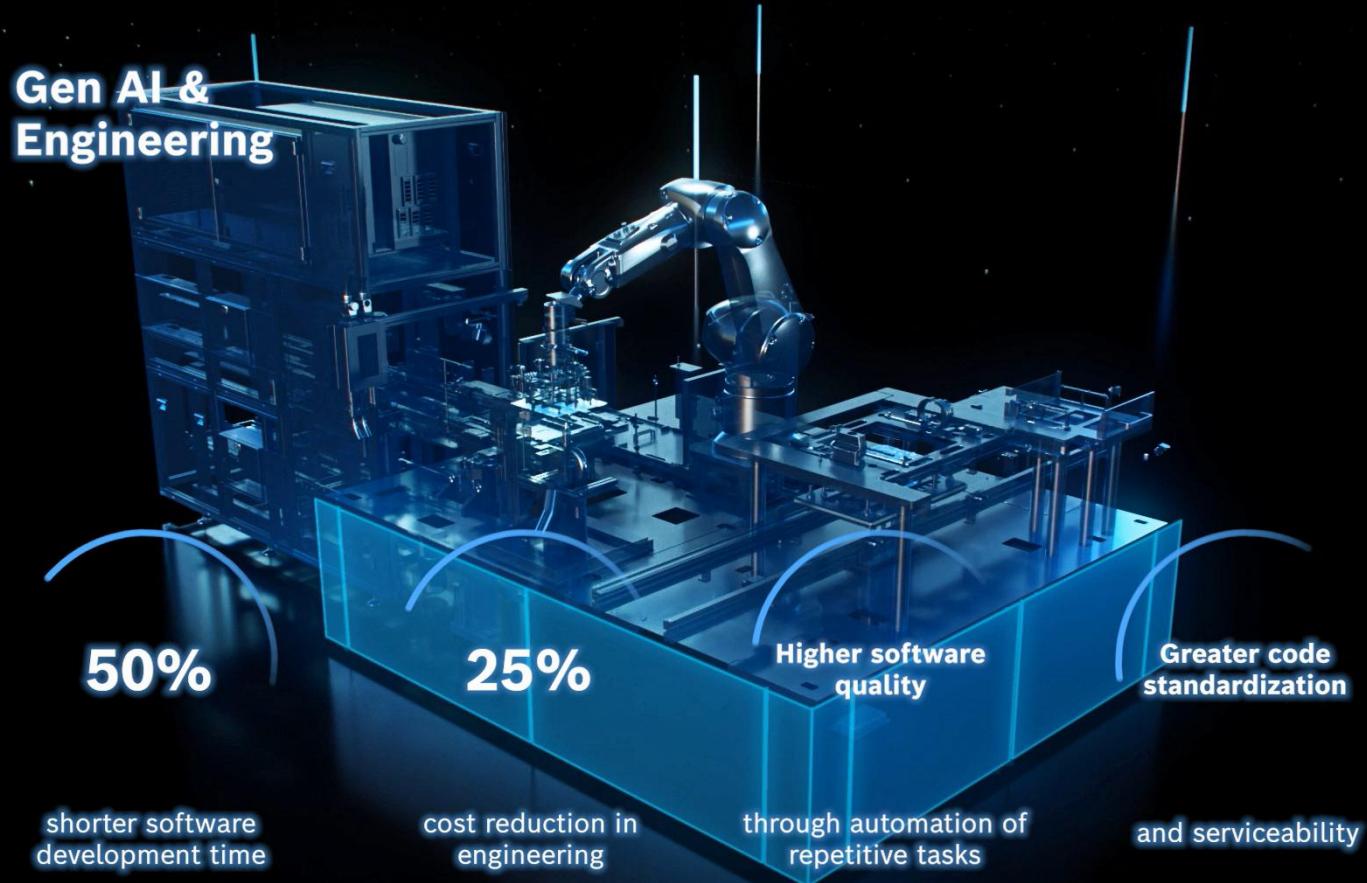

- BMG connects **all engineering disciplines through an end-to-end AI enabled digital approach** – from concept to operation.
- **Model-based Systems Engineering (MBSE)** provides a unified data backbone linking mechanics, electrics, and software, forming the basis for Digital Twins.
- These virtual models enable simulations, early validation, virtual commissioning, and rapid adaptation to design or process changes.
- With AI-driven engineering tools and seamless field-data integration, equipment becomes intelligent, self-optimizing, and predictive in operation.

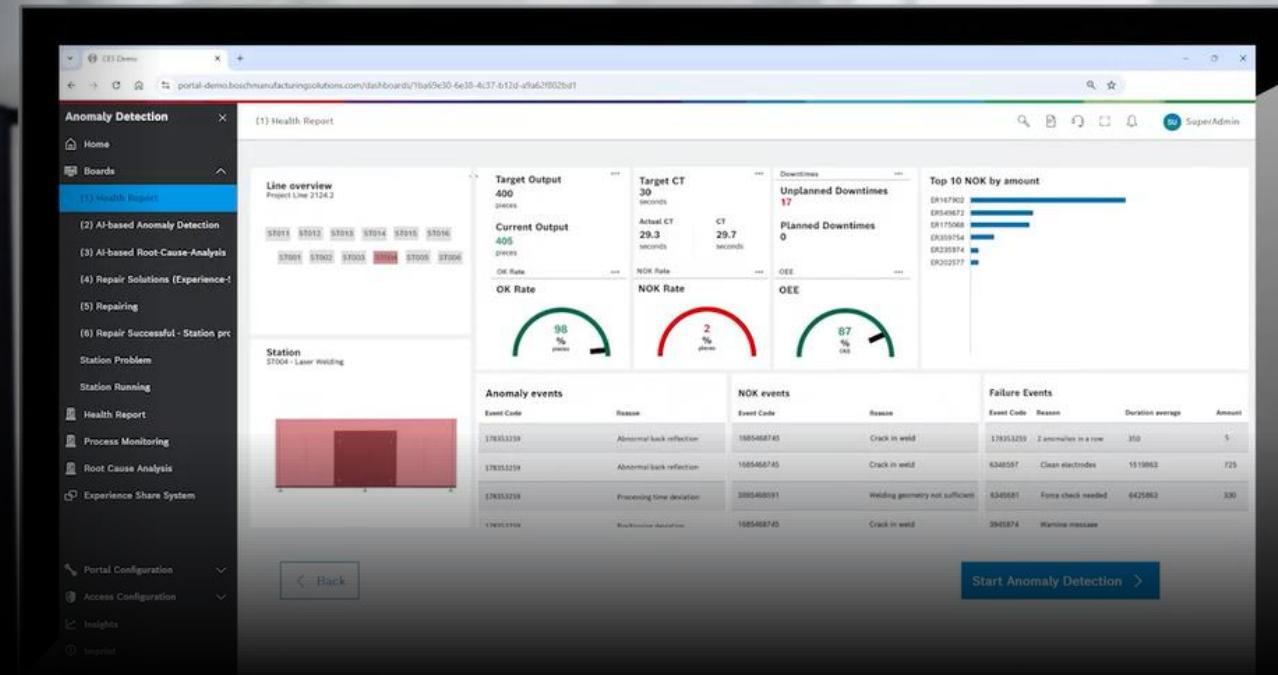

Benefits

- **Cheaper:** 25% cost reduction in engineering
- **Flexibility** of equipment to various product types (variance of shape, size, and process sequence)
- **Operational Efficiency:** high technical availability from start, reduced downtime (up to 70% reduced) during services, predictive maintenance capabilities, up to 30% reduction in risk & failure costs
- **Faster:** up to 2 months shorter commissioning time, reduced project lead time by 4-8 weeks in average, 50% shorter software development time
- **Secure:** 100% protection of customer data
- **High Scalability** through high data integrity
- **Predictive maintenance and proactive service proposals**

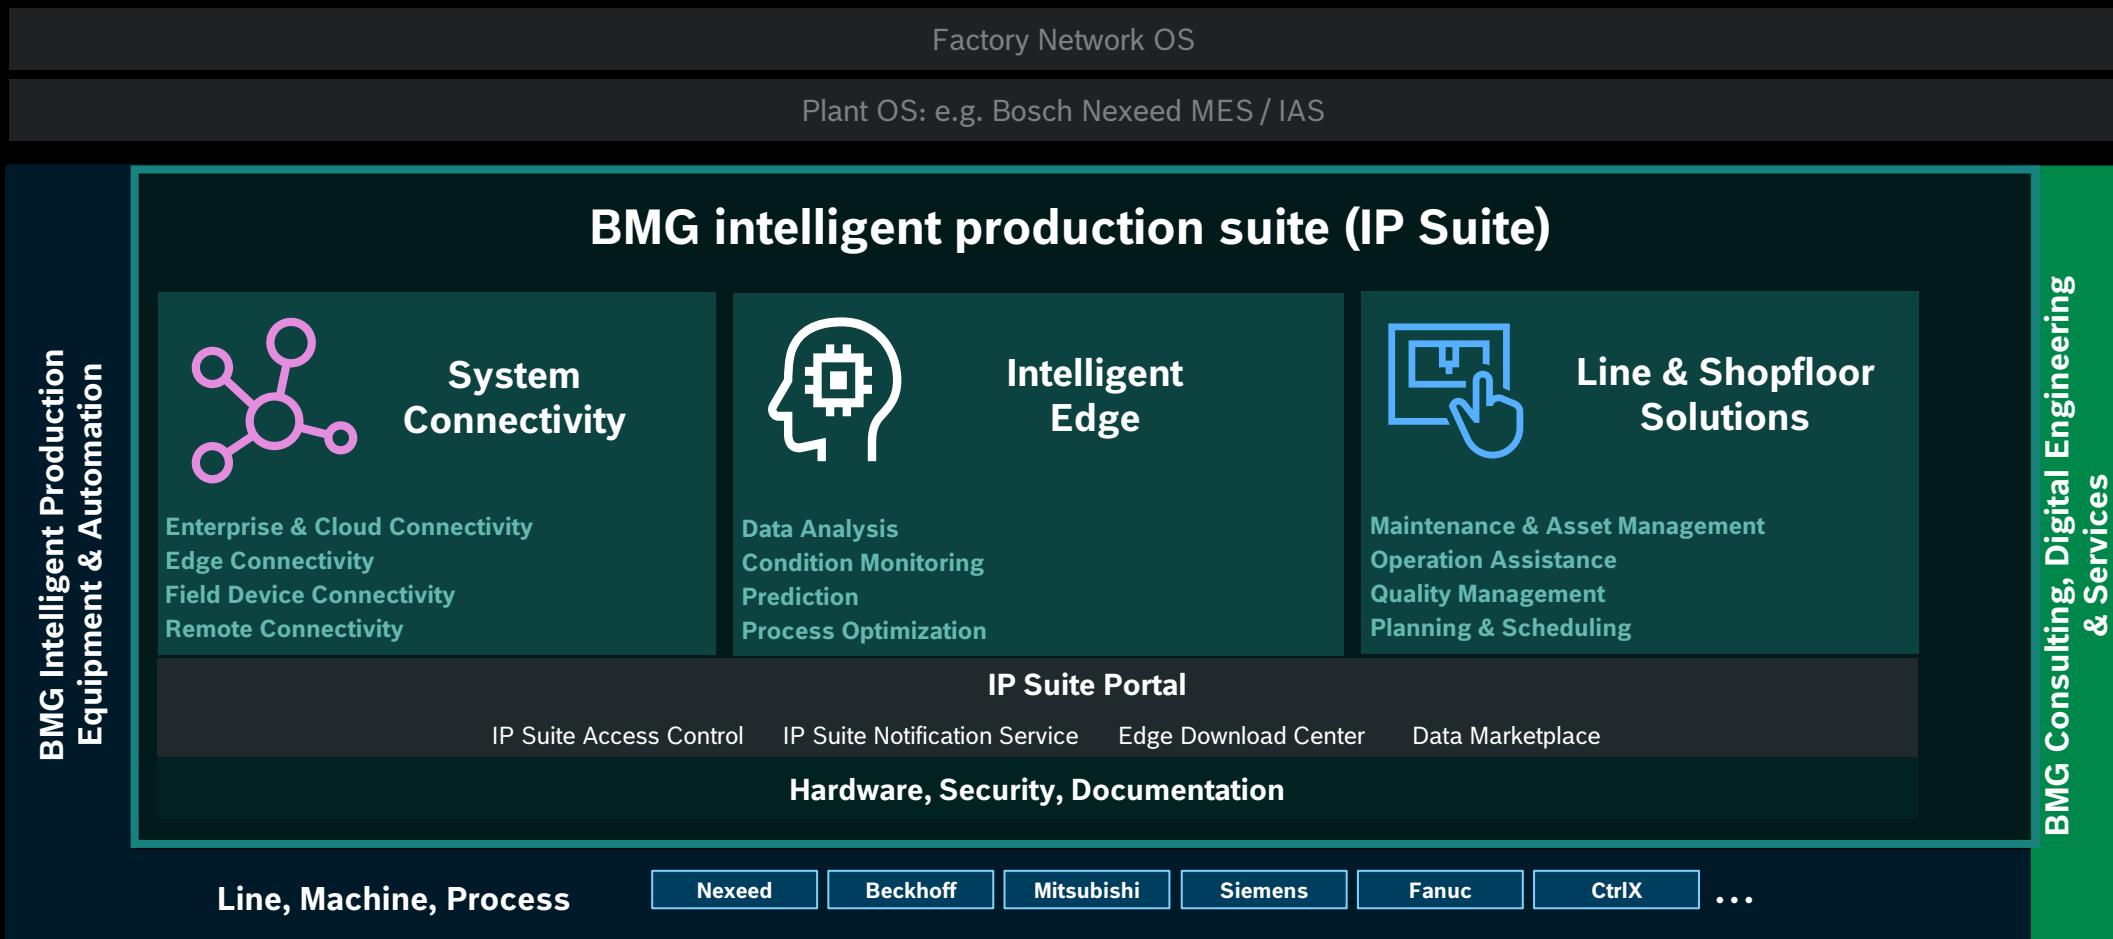

Intelligent Production Suite *IP Suite*

BMG | Digital & Intelligent Solutions

Intelligent Production Suite (IP Suite) framework

BMG | Digital & Intelligent Solutions

Intelligent Production Suite (IP Suite) – Modules

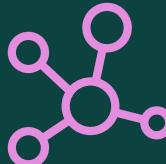

Factory Network OS

Plant OS: e.g. Bosch Nexeed MES / IAS

Software-defined manufacturing

BMG intelligent production suite (IP Suite)

BMG Intelligent Production
Equipment & Automation

System Connectivity

- Universal Machine Connector (UMC)
- Line Data Distribution (LDD)
- Transport Order Management

Intelligent Edge

- Health Report, Process Monitoring & Production Parameter Checker
- Energy Monitoring
- MathEngine - Algorithm Execution Engine*
- AI Process Parameter Optimization (PPO)*
- AI Anomaly Detection & Root Cause Analysis*
- Predictive Maintenance
- Process Development Assistant (PAMOS)
- Cycle Time Assist & Analysis (BCI Partner Solution)

*AI integrated

Line & Shopfloor Solutions

- Maintenance Ticket system
- Experience Share System*
- DashCAM – Event Based Videomonitoring
- Universal HMI (uHMI)
- Live Statistical Process Control (SPC)
- Component lifecycle

BMG Consulting, Digital Engineering & Services

BMG @ CES | **AI-powered** **Machine Operation Optimum** **(AiMOOp)**

- Process parameters and machining strategies are determined fully automatically based on a trained process model, without the need for predefined machining parameters
- The system can automatically detect deviations from the target state and, if necessary, recalibrate itself autonomously

 The system is consistently operating at optimal performance
→ reduced costs, outcome optimum, reduced scrap rate
→ Significantly improved process efficiency and quality

 Complex processes need less operator know how
→ self operating and self learning machine

 Assistance for operator to understand multidimensional parameter space

 Less downtime of machine, less parts, less human capacity needed to find optimal settings

BMG @ CES | AI-powered Process Parameter Optimization & Control (AiPOC)

Optimum parameter settings for production based on AI models and optimization methods

- Assistance in multidimensional space (many different parameters & quality criteria) by visualization of models and optimal areas for production
- Trained models or derived algorithms in control loops to keep machine during production in optimum parameter settings

Benefits

- Scrap reduction by keeping machine (e.g. against drifts) in optimum parameter settings (proven use case: 250k€ savings per line per year)
- Reduction of needed parts, time, machine and human capacity to find optimal parameters → e.g. > 80% time reduction finding initial parameter set based on trained process models
- Structured data storage enables reuse of data and further AI usage (LLM)

Technical specifications & AI Models

- Web applications with user guidance
- Machine interface via different communication protocol (e.g. OPC—UA)
- Flexible interface to integrate customer algorithms (e.g. Python) for control loops
- Bayesian Optimization (ML) & Gaussian Process Models (ML)

Proven use case:

250.000 €

savings per line & year by established control loops

> 80%

time savings in initial parameter finding

BMG @ CES | AI-powered Machine Operation Optimum Example (AiMOOP & AiPoCo)

AI-based multi-stage hybrid laser process

- Hybrid laser processing w/ fully automated measurement & AI model-based evaluation of parameter and processing strategy → self-optimization of laser process and machine
- Ablation: Multi-stage hybrid laser process with high-volume ablation (>10 mm³ / structure) and high-precision finishing (<1.5 µm contour accuracy / roughness)
- Welding: Sensor-based monitoring of laser process and real-time quality assessment followed immediately by model-based evaluation of the rework strategy if necessary

Benefits

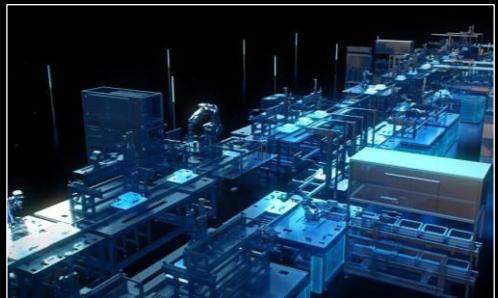

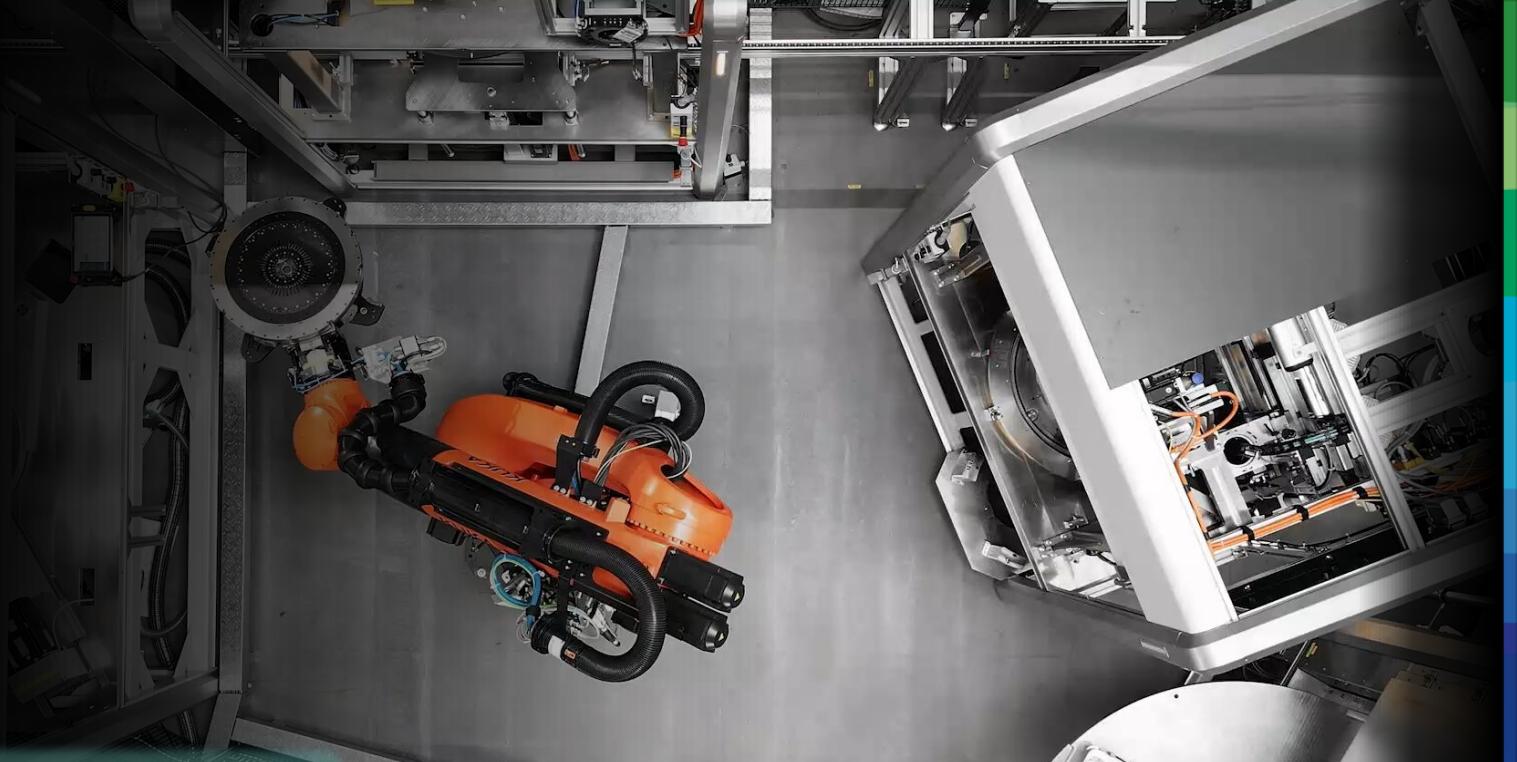

- **Zero failure rate** through **closed-loop process control** & adaptive process guiding
- **Welding:** reduced scrap rate, higher quality, optimized cycle time, enhanced productivity even for safety-critical components
- **100% machine up time** due to fully automated monitoring and calibration without any kind of operator influence

Technical specifications & AI Models

- **Ablation ratio** >0.5 mm³/s combined with high surface quality (Sa < 0.5 µm) & **positioning accuracy** of laser structures relative to references 6s <5 µm
- Welding: Strength values of base material are achieved
- **Large language model (LLM)** for process software development
- **Deep learning (DL)** methods for analyzing sensor data, process monitoring & anomaly detection
- **Machine Learning (ML)** methods for dynamic adaption of process parameters in real time

Manufacturing Processes – innovative & intelligent.

Efficient solutions for demanding & customized applications

Handling, Robotic & Automation

- Handling & Positioning
- Transfer, Transport & AGVs
- Robotics & Gripping
- Feeding, Clamping, Palletizing

Machine Vision

- Assembly Guiding
- Process Control
- Quality Check End of Line / Inline

Separating

- Stripping / Skinning
- Cutting with undefined Edge (Internal Grinding & External Grinding)
- Balancing

Joining

- Resistance & keep welding
- Friction welding
- Ultrasonic welding
- Dispensing & gluing
- Tightening & screwing

Measurement & Testing

- Electrical Testing & Characterization
- Leakage, Gas & Pneumatic Testing

Laser Technology

- Laser Welding (on-the-fly)
- Laser Cutting
- Laser Drilling
- Laser Micro Structuring

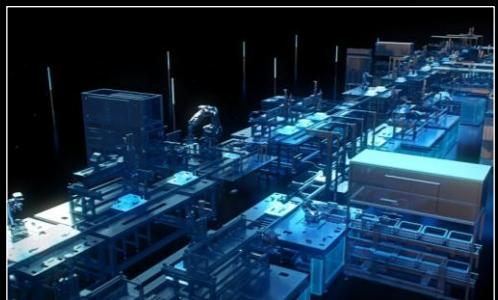

Forming

- Twisting
- Bending
- Winding
- 3D Forming

Surface Technology

- Electro plating
- PVD coating
- Functional printing

Services along the entire product lifecycle

Engineering Consulting & Digital Engineering

Advanced Manufacturing Processes & Technologies

Digital & Intelligent Solutions

Services along the entire product lifecycle

Consulting Services & Services Contracts

- Advice from Specialists
- Manufacturing and production concepts, line design
- End-of-life Consulting
- Individual Service Contracts

Engineering Services

- Development of new processes
- Simultaneous Engineering
- Feasibility Studies
- Standardized platforms
- Software applications
- Optical systems and processes

Modernization & Condition-based Services

- Increase production efficiency
- Individual customer reports
- Suitable implementation concepts: Classic modifications, specific engineering solutions to digital production concepts

Technical Support

- Ramp-up Support
- Classical Maintenance
- Machine Availability
- Modifications
- Relocations
- Online Support
- 24/7 Services Hotline

Spare parts & Repair Services

- Procurement of all types of technical parts
- & machine components and equipment
- Initial Equipment Package
- Exchange Parts Pool
- Global supply chain & logistic solutions in line
- Webshop

Training

- Standard Trainings & Education
- Customer-specific Training
